

SUSTAINABILITY. NOW.

# SUSTAINABILITY AS A SERVICE.

The New SaaS

---

# BUSINESS-DRIVEN SAAS

Traditional SaaS is a technology solution to a technical problem.

Sustainability as a Service is a business solution to a business need. Only from PCG.

## THE BUSINESS CHALLENGE.

Businesses seek to achieve the greatest flexibility, scalability and ability to respond to customer need. But technology often stands in the way of business sustainability due to closed, proprietary and nonintegrated architectures.

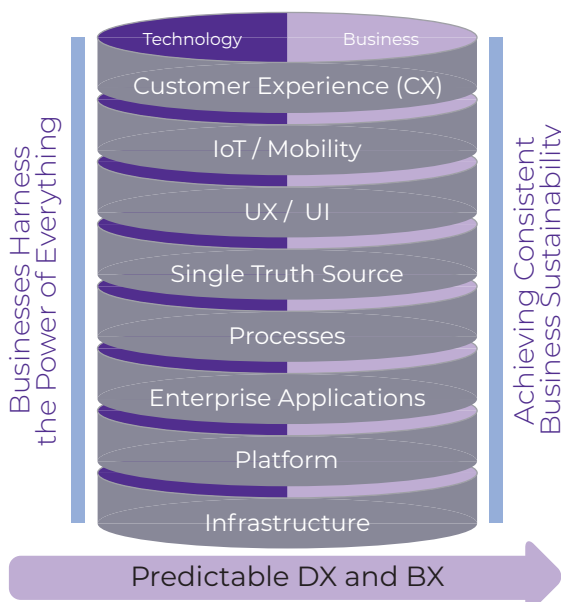

## ONLY ONE-HALF A SOLUTION.

Traditional SaaS focuses on technology, and represents “one-half a solution” to complex business process, information and experience requirements.

DON'T RISK YOUR BUSINESS ON HALF A SOLUTION.

## A NEW, COMPLETE SAAS.

Business-driven SaaS allows leaders to harness the power of everything, through predictable digital and business transformation, to achieve consistent, sustainable business.

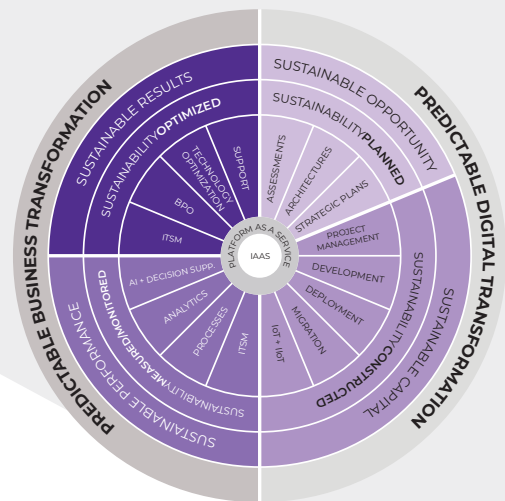

## THE BUSINESS-DRIVEN SAAS.

The new SaaS delivers what a business needs to lead in their industry. The new SaaS focuses on your business and where it wishes to be.

Your company’s mission and vision, strategies and actions, accounting, operations management and reporting to run in the cloud. We call it:

### SUSTAINABILITY AS A SERVICE

Sustainability as a service is the promise of digital and business transformation realized.

## REAL BUSINESS FREEDOM.

SustainabilitySAAS delivers sustainable business opportunity, capital, performance and results freedom, giving you the power to lead markets, customers, suppliers and industries forward.
