# MAKING INDUSTRY 4.0 REALLY WORK.

*In the platform economy, it's critical to have the right operating system. The PCG I4.OS is the foundation businesses rely on to get the most out of Industry 4.0.*

## INDUSTRY 4.0 IS THE FUTURE.

The platform economy is at the heart of business today. Platforms provide the infrastructure on which to run business processes, analytics, applications and workflows in a manner that is secure, scalable and integrated.

Platforms are an integral component of the “Factory of the Future” and “Digital Business” which, today, is a requirement for cost, labor, opportunity and profitability.

Industry 4.0 platforms make established business models obsolete or force a repositioning around new ways of doing business demanded by customers, supply chain partners and the marketplace.

## THE INDUSTRY 4.0 GAP.

While Industry 4.0 enables completely new services and business models, there exists two gaps in most companies.

First, is the gap between aspiration and capability. The second is the gap between advantage and risk.

Many businesses are “stuck” in legacy business systems, outdated business processes, disconnected company information, sporadic mobility and little connection between the “shop floor” and the “top floor.” This creates the aspiration and capability gap.

Platforms create their own gap in that they are both an advantage and a risk. An advantage by bringing new capabilities, security and scalability to a business, and an advantage in that much is out of the traditional control of business.

These gaps create great pressure on business leaders to consider and decide on how to move forward toward Industry 4.0.

PCG offers the industry's first, most comprehensive Industry 4.0 Operating System designed to eliminate the gaps, make technology decisions easier and to enable business to reap all the benefits of Industry 4.0 possible.

Industry 4.0 benefits are realized through a four-step process, each building on the prior to ensure success:

**I4.OS Maturity Assessment:** Baseline your business, organization, processes and technologies to understand and prioritize the way forward to Industry 4.0 success.

**I4.OS Technologies:** The identification and validation of the right platform technologies that predictably delivers Industry 4.0 from “the shop floor to the top floor.”

**I4.OS Implementation:** Applying the proven and successful experiences, skills, knowledge, methodologies, leadership and partnership that makes Industry 4.0 a reality—on-time and on-budget.

**I4.OS Optimization:** Taking your business to the next level of integration, automation, artificial intelligence and machine learning capability that truly sets your business apart from the rest.

**While many companies talk about Industry 4.0, PCG is the only source of the I4.OS that makes Industry 4.0 work. Put I4.OS to work and lead.**
