# MAKING SUITESUCCESS EVEN BETTER.

Expanding the SuiteSuccess Methodology to enable businesses of all sizes and complexities to configure the NetSuite platform for success today—and tomorrow.

## SUITESUCCESS.

NetSuite SuiteSuccess delivers an agile implementation methodology that saves time, money and headache historically associated with:

- Tedious and lengthy cycles
- Ballooning project costs
- Implementation fatigue
- Business disruption

Sometimes a team needs more direct help implementing NetSuite, may have a more complex operation, or may not have sufficient internal resources. In these instances it is important to ensure a team is ready, comfortable and confident to go-live by having:

### Skill and Approach Flexibility:

- Highly skilled and experienced resources
- Ability to translate your business processes to configuration elements
- Methods to migrate data from complex legacy systems
- On-site options when remote configuration just won't do

### Value and Benefit Realization:

- Personalized orientation and training
- End-to-End options for performance optimization and Release testing
- Recognizing the right time to "Unlock the Suite" for the greatest value

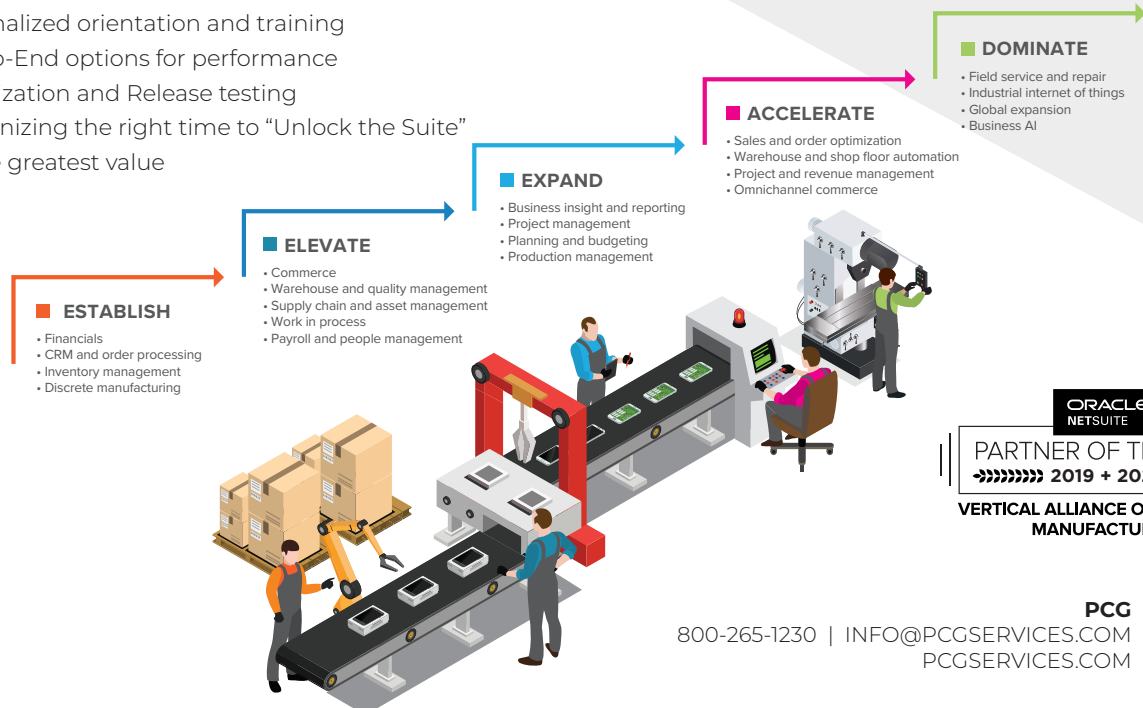

PCG extends the NetSuite SuiteSuccess approach by recognizing that not all SuiteSuccess requirements and configuration outcomes are the same. Some customer situations warrant additional services to optimize their SuiteSuccess Edition and user adoption in their business environment.

VELOCITY™ delivers a flexible, adaptable path to customer success for businesses of all shapes, sizes and stages of maturity no matter the industry.

### VELOCITY™ uniquely delivers the benefits of:

- Smoother business and technology migrations
- Budget predictability based on NetSuite prepackaged scenarios
- Higher user acceptance
- Reliable NetSuite operational disciplines
- Accelerated NetSuite value realization
- Better system utilization and optimization
- Enabling an Industry 4.0 foundation for your business
